CAREER OBJECTIVE

High-achieving B.Tech Computer Science student ,expert in developing low-latency backend architectures and AI-driven safety protocols. Passionate about mastering complex data structures and algorithms to build scalable, real-world software solutions.

PROJECTS

Multi-Modal Toxicity Detector| [Github](#)

- Backend & API: Architected a Node.js/Python REST API integrating OpenAI Whisper and Toxic-BERT, achieving 90%+ accuracy in real-time live media moderation.
- Signal Processing: Detected non-verbal aggression via decibel spikes and pitch shifts using custom Librosa logic.

AI-Driven 3D Packing Optimizer| [Github](#) | [\[Live URL\]](#)

- Core Algorithm: Built a sub-2-second Python heuristic to solve the 3D Bin Packing Problem, maximizing container density and reducing freight costs.
- Data Pipeline: Engineered a Pandas pipeline to process JSON inventory matrices, applying spatial sorting and physics for load safety.
- Visualization: Deployed a Streamlit dashboard with a Plotly 3D Digital Twin for real-time load auditing

Boutique Demand Forecaster|[Github](#)

- Predictive Analytics: Developed a sales forecasting dashboard leveraging the Prophet model to analyze historical category data and track inventory burn rates.
- Business Optimization: Engineered profit simulators and markdown optimization tools using complex datasets encompassing pricing, sizing, stock levels, and customer ratings.
- Process Automation: Streamlined operations by automating supplier reordering via WhatsApp integration and tracking customer loyalty metrics and return rates.

EDUCATION

B.Tech in Computer Science and Engineering

2024 – 2028

Banasthali Vidyapith, Rajasthan

CGPA: 8.9

Subjects: Data Structures and Algorithms, C Programming, Python, Design and Analysis of Algorithms, Database Systems, Software Engineering, System Programming ,Object Oriented Programming, Operating Systems, Linear Algebra, Artificial Intelligence and Data Science, Discrete Structures, Computer Organisation and Architecture

TECHNICAL SKILLS

- Languages & Tools: Python, C++, HTML/CSS, Git/GitHub, REST APIs, Streamlit, VS Code
- AI & Analytics: NLP (BERT, Whisper), CV (OpenCV), Prophet, Librosa, Pandas, NumPy, Matplotlib
- Data Engineering: MySQL, MongoDB, Hadoop, Spark, Hive

HONORS & ACTIVITIES

- Technical Highlights: Ranked Top 10 in the Hack-Celestia global hackathon (48-hr AI prototype)
- Campus Leadership: Managed a 500+ live audience as a Stage Host and Lead Performer, ensuring seamless event flow through quick-thinking crowd interaction.

CERTIFICATES

- Data Science Methodology – IBM via Coursera (Data pipelines, modeling & evaluation) | [View Credential](#)
- Tools for Data Science – IBM via Coursera (Jupyter Notebooks, RStudio & GitHub) | [View Credential](#)
- Crash Course on Python – Google via Coursera (Core Python, data structures & automation) | [View Credential](#)
- What is Data Science? – IBM via Coursera (Data lifecycle, Big Data & AI applications) | [View Credential](#)
