CAREER OBJECTIVE

Computer Science student specializing in scalable backends, predictive AI, and AI-assisted workflows. Eager to engineer fast, secure, and highly reliable software solutions. Driven by a builder's mindset to continuously explore emerging technologies and deliver impactful products.

EDUCATION

B.Tech in Computer Science and Engineering

2024-2028

Banasthali Vidyapith, Rajasthan

CGPA: 9.07

Relevant Coursework: Data Structures and Algorithms, Design and Analysis of Algorithms, Object-Oriented Programming, Software Engineering, Database Systems, System Programming, Artificial Intelligence and Data Science, Computer Organization and Architecture, Discrete Structures, Linear Algebra, C/C++ Programming, Python

TECHNICAL SKILLS

- **Languages & Core Concepts:** Python, C, C++
- **Web & Tools:** Node.js, REST APIs, Streamlit, Git/GitHub, VS Code
- **AI & Analytics:** NLP (BERT, Whisper), OpenCV, Prophet, Pandas, NumPy, Matplotlib, GitHub Copilot
- **Data Engineering:** MySQL, MongoDB, Neo4j

EXPERIENCE

Machine Learning Intern | Techondater | May 2026 – June 2026

[Github](#) | [Live URL](#)

- Solved wasted shipping space by building an AI-powered 3D packing algorithm in **Python**, successfully helping the company maximize container space and lower overall freight costs.
- Sped up complex shipping decisions by creating an interactive 3D web app using **Streamlit**, **Plotly**, and **Pandas**, allowing the logistics team to view exact loading setups in under **2 seconds**.

PROJECTS

LiquiShield (H0 Hackathon) | [Github](#) | [Live URL](#)

- Upgraded slow financial risk models by building a fast backend with **FastAPI** and an **AWS database (Aurora PostgreSQL)**, dropping simulation run times to under **3 seconds**.
- Built an AI tool using **Facebook Prophet** and **NLP** to analyze market trends, successfully predicting bank failures a full **30 days** before they happened.
- Created and deployed a live dashboard on **Vercel** that turns complex data into clear alerts, helping business teams easily understand risks and make quick decisions.

Multi-Modal Toxicity Detector | [Github](#)

- Created a fast, real-time backend using **Node.js** and **Python** to automate slow content moderation, instantly scanning and flagging toxic behavior across video, audio, and text streams.
- Combined **OpenAI Whisper**, **Toxic-BERT**, and **OpenCV** to analyze spoken words, voice tone, and physical gestures all at once, successfully catching harmful content with over **90% accuracy**.

Boutique Demand Forecaster | [Github](#)

- Prevented costly overstocking and stockouts for retail businesses by building a machine learning pipeline with **Python**, **Pandas**, and **Facebook Prophet** that accurately learned shopping patterns from past sales data.
- Created an interactive **Streamlit** dashboard that turns raw sales numbers into clear visual trends, helping shop owners easily optimize their daily inventory and make smarter purchasing choices.

HONORS & ACTIVITIES

- **Technical Honors:** **Top 5 of 300+** at Internal SIH | **Top 10** in Hack-Celestia (Global AI) | **H0 Hackathon** participant
- **Leadership:** **India AI Impact '26** Delegate | Stage Host for 500+ attendees at **Mayukh Tech Fest**
